

Beyond the Golden Age?

Milan, Italy

CLIENT

Saint-Gobain

PROJECT

INTERNI CRE-ACTION

AREA

6 × 8 × h 4 m

DATE

2025

There was a time when the **Golden Age** evoked images of prosperity and progress. But today, is the future really built on precious surfaces, or rather on materials capable of transformation and durability?

Studio Marco Piva's installation for Saint-Gobain invites **exploration**.

Two boxes, one emerging from the other, prompt the questioning about the **possibilities of materials**, in their many variations and finishes. A responsible architecture made entirely of materials from Saint-Gobain's vast offer, introduces us to a **new world of experimentation**. The external structure is formed by the intersection of two volumes at different heights, and is characterised by a light construction system of cold-pressed steel and fibre reinforced gypsum slabs, dynamic and flexible, with an anthracite coloured box that acts as a covering for the corten core which, with its oxidised materiality, **speaks of time and resistance**.

The metal casing invites entry with a perimeter LED, which opens up **access to another dimension**.
